

PEDITOX© DETOX THERAPY

The revolutionary way to detoxify

We are continually being bombarded with toxins. Not only from the polluted environment in which we live, medications, alcohol, cigarette smoke, car exhaust emissions and chemicals, but also from those produced in our bodies – the by-products of nutrient breakdown, hormones and bacterial waste products from the intestines. All this, plus the toxic load we have inherited from our forebears.

All of these substances need to be eliminated but we have become so toxic that our bodies struggle to get rid of it. It is the role of the liver to render these toxins into less harmful compounds for excretion and if this is not being done efficiently, it can lead to symptoms of ill health.

We can help the process of detoxification and take some pressure off our livers through diet but we can now use PEDITOX©*, a detox foot spa treatment which helps stimulate our own system to rid itself of toxins, via the thousands of pores in our feet, through an electro-magnetic detoxification process.

Reducing the toxins in your body may help the following:

- Arthritis
- Circulation
- General metabolism
- Heavy metal intoxication
- Kidney function
- Lactic acid retention
- Liver function
- Headaches
- Menstrual pain – PMS
- Skin problems
- Stress

The less toxic our bodies are the healthier we will be!

All you have to do is sit for 30 minutes with your feet in a special foot spa of warm water and watch the toxins float away!

*** Not recommended during pregnancy or for anyone with: a pacemaker, implanted organs, epilepsy, Type I diabetes, open wounds on the feet.**
